

How many years of lead-acid battery warranty

How long does a lead acid battery last?

However, poor management, no monitoring, and a lack of both proactive and reactive maintenance can kill a battery in less than 18 months. With proper maintenance, a lead-acid battery can last between 5 to 15 years. To ensure the longevity and optimal performance of your lead acid battery, proper maintenance and storage are crucial.

What is the warranty on Exide Batteries?

The label on every Exide battery specifies the total number of months covered by the free replacement period and the Pro-Rata period for batteries fitted in private cars, multi-utility vehicles*, two-wheelers, inverters, gensets and solar applications. In all cases the warranty is applicable from the date of sale to the original purchaser.

When does a battery warranty start?

For a battery being replaced on Free of Cost basis the warranty commences from the date of sale of the original battery as stated in the original Invoice and not from the date of replacement given. For batteries purchased on pro-rata warranty settlement discount, a fresh warranty is applicable from the date of purchase.

How long do batteries last?

It was common to state that batteries would endure for a period of years depending upon type regardless of manufacturer in order to facilitate common expected results. In Germany, these endurance characteristics were divided into 3 subtopics: endurance in float service, endurance in overcharge and endurance in cycles⁴.

How many charge cycles can a lead acid battery undergo?

The number of charge cycles a lead-acid battery can undergo depends on the type of battery and the quality of the battery. Generally, a well-maintained lead-acid battery can undergo around 500 to 1500 charge cycles.

What maintenance practices extend the life of a lead acid battery?
