

How to remove the glue filling of the battery pack

How do you remove adhesive from a battery well?

Begin by removing all of the old adhesive and residue from the adhesion surfaces in the battery well. You can pull the adhesive off with tweezers or your fingers, roll it up on the tip of a spudger with a roll-and-pull motion, or scrape it off with the flat end of a spudger.

How do you remove adhesive strips from a battery?

Once they adhere to the battery, they can't be removed and realigned. Place the battery face down on a flat surface. Starting at the cut end of the adhesive strips, peel off the large blue film covering the strips. Use a pair of tweezers to loosen the blue layer if you have trouble starting near the cut section of adhesive.

How do you remove a battery pack from a keyboard?

Careful not to melt the keys. Then squirt acetone between the battery pack and the housing and use a playing card to slice through the adhesive. Repeat for every battery pack. When you're done removing the battery, let the housing cool down then use a chisel X-acto blade #17 to remove the adhesive from the housing.

How do you remove glued down components?

You can remove glued-down components in all kinds of ways. One of the simplest is to use a solvent, such as iFixit Adhesive Remover, to dissolve the glue. Follow this guide for general tips and instructions for using adhesive remover on any device. First, prepare your device for surgery. Always disconnect the battery before you start.

Can you use stretch release adhesive on a battery?

Avoid applying adhesive over ribbon cables or delicate surfaces like NFC or wireless charging coils. Avoid applying adhesive too close to sensitive components. The stretch release adhesive strips will be applied to the rear of the replacement battery, and may need to be cut to length.
