

# Latest news on energy storage policy in the Democratic Republic of Congo

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

Could the Congo become an electricity exporter?

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are addressed, Democratic Republic of the Congo could become an electricity exporter.

What is the energy potential of the DRC?

Overall, the DRC has immense energy potential, which includes non-renewable resources such as oil, natural gas and uranium, as well as renewable energy sources such as hydroelectric, biomass, solar, wind and geothermal power. The government's vision is to increase the level of service up to 32% in 2030.

Could natural resources help the DRC turn a socio-economic corner?

Government and UN-led programmes to harness the country's natural resources - for energy and mining - could help the DRC turn a socio-economic corner, reports Yunus Kemp. The Democratic Republic of Congo (DRC) should be one of the wealthiest nations on earth when you consider its immense natural wealth and huge hydropower potential in Africa.

Can natural wealth help the Democratic Republic of the Congo?

The Democratic Republic of the Congo faces many challenges to its development, but the country's natural wealth has the potential to lift more people out of poverty and help the world make the transition to renewable energy.

How will a new electricity connection impact the DRC?

This means the provision of 6,500 new electricity connections for the DRC and the installation of 2.5MW capacity of renewable energy. These connections are expected to positively impact more than 30,000 people and provide them with new or improved access to electricity. The country is sitting on untapped reserves of hydropower capacity.
