Where can I find free solar power tutorials?

FreeSunPower.com provides free beginner and advanced tutorials for setting up a solar power system for producing free electricity from the sun. Our tutorials cover Solar Panels, Charge Controllers, Power Inverters, Storage Batteries, AC Generators, Wires & Cables, Meters & Monitors, and more.

How does a solar power system work?

From here, the newly collected electricity flows through a regulator, or charge controller, so it can be used to power electronic devices, or stored within a battery bank. A simple solar power system will consist of four main components - a solar panel array, a regulator/charge controller, a battery, and an inverter.

Where can I learn about solar panels?

Solar Panel Energy System Tutorials, Design Tools, and an Interactive Solar Simulator. DIY Solar panel system help for achieving energy independence. FreeSunPower.com provides free beginner and advanced tutorials for setting up a solar power system for producing free electricity from the sun.

How many components do you need for a basic solar setup?

For a basic solar setup, the above 3 components will suffice. But before you get too happy, there is something that you need to know. The power we get from the solar setup is direct current (DC). The power we get from wall plugs is alternative current (AC). Which means, you simply cannot plug your house appliances directly into a basic solar setup.

How many solar panels are needed for a solar power system?

As you can imagine, one or more solar panels is required for any solar power system. Since they are the pieces of equipment that actually turn solar energy into useable electricity, they play a critical role in the entire system. Solar panel design is actually quite simple.

What are the components of a solar power system?

A simple solar power system will consist of four main components - a solar panel array, a regulator/charge controller, a battery, and an inverter. Now that you have a basic understanding of how solar panels work, we can take a closer look at each of the four main components of a solar power system.
