

The battery meter is still flashing

Can a smart meter display problem be fixed?

However, the good news is that most display problems can be fixed with some simple troubleshooting steps. One common cause of display problems is a dead battery. If your smart meter has a battery, the first thing you should check is if it needs to be replaced. To do this, refer to the instruction manual that came with your meter.

Why is my smart meter showing a 'waiting for current data' message?

This should be avoided by the installer, but eventually your meter might need to be moved to resolve this problem. If your smart meter is showing a 'waiting for current data' message this is usually an indicator of connectivity issues between your In-Home Display (IHD) and smart meter.

Why does my smart meter have a connection problem?

Connection problems are a common issue with smart meters, and they can occur due to a variety of reasons. Smart meters use wireless technology to communicate with the energy supplier, and sometimes, the wireless signal may not be strong enough, leading to connection problems.

What are the top smart meter problems owners face?

It also found that smart meters expose people to fewer radio waves than mobile phones and wi-fi equipment. We reveal the top smart meter problems owners face - plus how to solve them. Including smart meter not working, issues with solar panels, smart meter monitor not working, problems with energy bills and much more.

How do I know if my smart meter is working?

You can check if your smart meter should work in smart mode with Citizens Advice's tool. If your smart meter isn't sending readings, it will usually still be recording your gas and electricity use. So you can submit readings manually to make sure your bills are accurate until your meter is smart again.

Why does my gas meter have a low battery warning?

It seems the low battery warning the user gets is the smart meter recording heavy usage even when the gas lever has been used to shut off the supply! If the meters are so smart then they should send a low battery warning to the supplier just like many household appliances tell the user the battery power is low when they use them.
