What is a backup battery?

Backup batteries are used in uninterruptible power supplies (UPS), and provide power to the computers they supply for a variable period after a power failure, usually long enough to at least allow the computer to be shut down gracefully. These batteries are often large valve regulated lead-acid batteries in smaller or portable systems.

How does a battery backup work?

The battery backup sits between the utility power (power from the wall outlet) and the parts of the computer. In other words, the computer and accessories plug into the battery backup, and the battery backup plugs into the wall.

What does a battery backup unit look like?

Higher-end battery backup units will also often feature LCD screens that show how charged the batteries are, how much power it's using, how many minutes of power are left should power be lost, etc. The rear of the UPS will feature one or more outlets that provide battery backup.

What is a UPS battery backup?

UPS stands for Uninterruptible Power Supply. Its main function is to keep a consistent flow of power to whatever device is plugged into it - even during a utility power outage. And it has a means of letting you know when an outage has occurred. A UPS battery backup will use beeping as a coded way of communicating its status to you.

Where can I buy a battery backup?

Once you've chosen the right one for you, you can buy a battery backup from popular manufacturers like APC, Belkin, CyberPower, and Tripp Lite, among many others. Battery backup has many names, including uninterruptible power supply, uninterruptible power source, online UPS, standby UPS, and UPS.

Are battery backup systems worth it?

Some battery backup systems you find may seem pointless because they only supply a few minutes of power. However, something to consider is that with even five minutes of extra power, you can safely save any open files and shut off the computer to prevent hardware or software damage.
