

# What kind of glue should be attached to the back of the solar panel

Can you use adhesive on solar panels?

I strongly urge you to avoid using any adhesive for solar panels. Keep in mind that flexible solar panels don't last long. You will probably need to replace them every couple of years. That will be a challenge with them glued in place. For rigid panels, the best adhesive would be M6 bolts.

How much adhesive do I need for a solar panel bracket?

If you're using adhesive you want as much surface area connection between the bracket and the roof. A couple inches of bracket may not be enough. Using adhesive under Unistrut that matches the full length of the solar panels is much better. But I'm a lot more comfortable with actual fasteners.

How do you attach solar panels to a cargo trailer roof?

I have used adhesives to attach solar panels to the roofs of two cargo trailers. One was 18 years ago, the other one 7. They are both still on there very tight. Clean the roof VERY well. Use alcohol on the roof and the feet to make sure it is absolutely clean. When it is dry, use E6800 adhesive. It's available at craft stores, or online.

What is the best adhesive for rigid panels?

For rigid panels, the best adhesive would be M6 bolts. These are rigid panels being mounted on aluminium brackets. I'll actually be replacing one of the factory panels and notice they only use adhesive. M6 bolts make sense for strength, my concern is they introduce an entry point for moisture.

What types of sealants can be used for solar panels?

Other types of adhesives and coatings, such as epoxy-based or UV-curable sealants, may also be used for specific sealing applications in solar panels, depending on the manufacturer's recommendations and the installation's specific requirements. Waterproofing is a critical aspect of sealing solar panels.

How much adhesive do I need for a flexible panel?

Ensure you have a 2mm bed of adhesive once the panel is in place. More adhesive is better than too little. I also used 522 to stick down a flexible panel on a previous van and no issues with that either.

2. Attach the Fixing Bracket to the Solar Panel. Once you've gathered all the tools and followed up on permits and safety requirements, it's time to set up your mounting system. The first step is to attach the fixing ...
